

Subtitle Transmission Control Software, STC

STC is the core of the subtitling system. It connects the various systems and automatically controls these without any operator intervention. One monitor is required to overview the complete subtitle system, and many problems resolve from the STC console.

STC is a flexible product and solution that is adaptable for most station configurations.

STC is the core of Cavena's transmission system. It requires no operator intervention and utilises only one monitor to overview and control the entire system. STC is a flexible product that is configurable to most user requirements.

The internal web server allows monitoring of the subtitle system from any remote computer via a network or modem. Any standard web browser can be used to monitor status on all channels and interfaced systems.

STC interfaces to most automation systems on the market today. It imports playlist files in different formats from most planning and scheduling systems, and subtitle files extracted via the Cavena SAM interface.

The STC can be co-located with other Cavena software and is a scalable solution.
